## EN54-13 approval for Taktis Addressable fire alarm panels

Kentec are proud to announce that their range of Taktis Addressable Fire Alarm panels have successfully achieved EN54-13 approval in conjunction with Hochiki and Apollo loop devices.

Kentec Electronics is one of the world's leading life safety solutions manufacturers and approvals are a key part in demonstrating product quality and performance to a global market. EN standards are key to meeting the requirements of our European distributors, installers and end users.

EN54-13 is a system standard which focuses on the interaction and performance of the key components of the fire alarm system. As an open protocol panel manufacturer, it is important that our panels are compatible with the range of devices supplied by our detection partners Hochiki and Apollo. EN54-13 approval demonstrates this through third party testing, providing installers and end users confidence and peace of mind that the system will meet the required performances.

One significant feature of EN54-13 is improved monitoring of critical circuits to enable detection of weak open and short circuit faults, this provides the user an early indication of potential problems.

The following documentation relating to the EN54-13 approval can be found on our website [www.kentec.co.uk](http://www.kentec.co.uk)
