

Product Obsolescence notice

Series 3000 Conventional control panels and repeaters

In line with Kentec's continuous development of new and more advanced products it is necessary to review the availability of older products. On this basis Kentec are officially announcing that the Series 3000 range of Conventional Control Panels and associated repeaters have been made obsolete with immediate effect.

Series 3000 was a range of conventional control panels and repeaters covering 12, 16, 24, 32, 40 and 48 detection zones. These products were removed from the Kentec price list 4 years ago to allow us to focus on our newer more current product ranges. However, a small number of panels have still been manufactured on special request.

The Series 3000 range has served Kentec and its customers well for many years however due to approvals, reduced requirement and increased component obsolescence it is no longer viable to manufacture these products.

Making this product obsolete allows Kentec to focus its attention on our current and new product offerings, providing enhanced performance and features.

Kentec will support existing Series 3000 installations with spares i.e. PCB's for as long as possible, alternatively our sales team will be happy to discuss upgrade solutions using our Taktis and Syncro AS panel ranges.

Below is a list of the Kentec part numbers affected by this obsolescence notice.
