

Product Obsolescence notice

JNP133K UTS Door controller

The JNP133K UTS Door controller manufactured by Kentec specifically for London Underground (LUL) installations.

Due to the age of this product, manufacturing changes and obsolescence of key components we can no longer manufacture this product or the replacement components required to maintain existing installations.

The part numbers affected by this obsolescence notice are as follows:

Part no.	Kentec Price list description
JNP133K	UTS panel Hochiki ESP protocol
S363	UTS module

Alternative solution

Kentec have an alternative product which replaces the original JNP133K which is the following:

Part no.	Kentec Price list description
JNP109K	UTS Gates/Door closer control unit

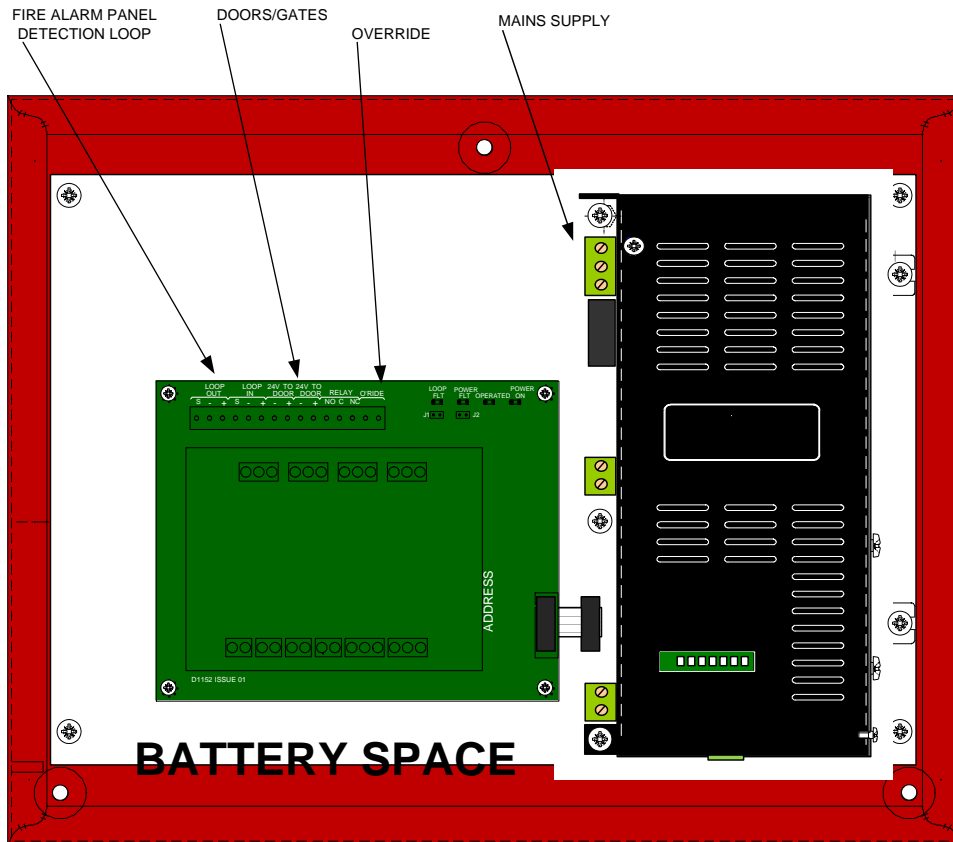

The JNP109K is a more up to date solution than the JNP133K and utilises the same small enclosure in the same approved finish as all other products supplied by Kentec for LUL installations.

The JNP109K controller contains an S406 power supply and an EN54 part 17 and 18 approved Hochiki CHQ-DRC module. The CHQ-DRC module is mounted on a PCB containing field wiring terminals and passive circuitry to operate relays controlling power to gate/door outputs. Status LEDs are also provided on the PCB to indicate "Loop Flt", "Power Flt", "Operated" and "Power on" states.

The modular design with no internal wiring makes the unit simple to install and easy to maintain.

An internal picture of the JNP109K is shown below:

JNP109K internal layout

Kentec recommends should any failures occur JNP133K units installed they should be replaced with the alternative JNP109K.

Should you require any assistance with the above then please do not hesitate to contact your sales representative.
