

STI-1311OFR-BREAK

Universal Stopper

Features

- ▶ Prevents accidental operation of Manual Call Point (MCP)
- ▶ Provides enhanced IP protection
- ▶ Can retrofit over existing installed MCP
- ▶ Suitable for surface or flush mount MCP install
- ▶ Tough UV stabilised Polycarbonate
- ▶ Quick and easy installation

Description

This cover is included as an optional accessory within the K-Mesh wireless product range for use with the KM-WL8-CP Wireless Manual Call Point but can be used with many different call points.

Designed to mount over the MCP its tough polycarbonate material can protect the call point from the severest of knocks, while also preventing accidental activation of the MCP. The cover also increases the ingress protection of the standard KM-WL8-CP from IP41 to IP54 allowing the Call Points to be installed in outdoor applications.

Clear instruction is provided on the cover relating to operation (see photo).

The cover has a simple 4 point fixing making installation quick and easy and allows it to be retrofitted over an existing installed MCP.

Covers have the facility to be fitted with a break seal to reduce the potential for malicious activation without hindering legitimate operation.
